Northstar Service Desk Copilot

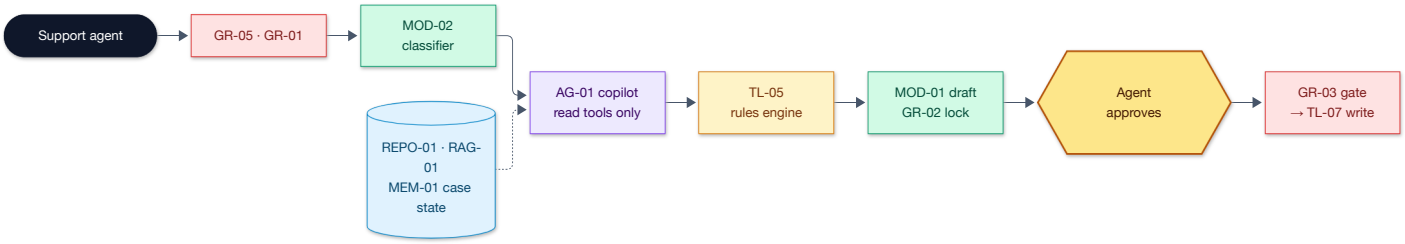

Owner: Head of Customer Service · **Version:** 1.0 · **Date:** 2026-11-04-17-00-00 UTC · Example 2 of 4 (illustrative numbers)

1. Problem

> **Support agents** struggle to **resolve warranty and order cases consistently** because **they combine five systems by hand and lose context between sessions**, resulting in **14 min per case, 9 % inconsistent warranty decisions and 12 % reopened cases (≈ €42k a month)**.

Scope: warranty, order-status and troubleshooting cases. **Non-goals:** unattended refunds, policy changes, unreviewed customer messages.

2. Solution: the copilot reads, rules decide, the agent approves, the workflow writes

Component	Used for	Catalog ID
Records + knowledge index + case memory	Authoritative facts; policy wording; state across sessions	REPO-01, RAG-01, MEM-01
Tools	Read records; compute eligibility; propose; commit (approved)	TL-01…08
Models	Classifier routes; LLM picks tools and drafts	MOD-02, MOD-01
Workflow / agent	Fixed stages, with a bounded read-only agent step	WF-01, AG-01

#	Use case	Target user	Priority
UC1	Warranty eligibility claim	Support agent	★ riskiest
UC2	Where is my order?	Support agent	High
UC3	Troubleshoot and escalate	Support agent	Medium
UC4	Resume an interrupted case	Next-shift agent	High

3. Risks and guards

Risk	Guard
Another customer's data exposed	`GR-01` backend ownership check on every read; 100 % denial on fixtures
Model overrides eligibility	`TL-05` rules decide; `GR-02` blocks drafts that contradict the result or its rule IDs
Duplicate or silent write	`GR-03` approval token + idempotency key; success shown only from the receipt

Key assumption: the warranty rules fit an explicit table (`POL-01`). Cases outside it go to the team lead.

4. Evals

Measure	Metric	Baseline → target / threshold
Value	Average handling time · reopen rate	14 → ≤ 6 min · 12 → ≤ 6 %
Quality	Eligibility = oracle · tool accuracy · unsafe actions	100 % · ≥ 85 % · 0
Adoption	Proposals approved without edits	≥ 70 %

Evidence so far: on 35 gold cases there are 0 leaks and 0 duplicate writes, eligibility matches the oracle on 18/18, and resume after restart is exact. Time saved is still a hypothesis. **Decision asked:** the **Head of Customer Service** approves a **4-week pilot** (4 agents, ≈ €22k) by **2026-12-04-17-00-00 UTC**.
